Building High-Value Health Systems

10 components to build a well-functioning, value- based, inclusive, and resilient health system.

Atun et al.

Our Journey

1st Edition - 2020

MPH – 2020 Class

Innovation and Global Health Systems

1 Global Hubs

50+ Participants

10 Ventures

2nd Edition - 2021

Hackathon Asia

Global Collaborative for Changing Diabetes in Children

7 Global Hubs

300+ Applications

162+ Participants

3rd Edition - 2022

Hackathon Africa

Building Resilience and the Future Health in Africa

11 Global Hubs

500+ Applications

250+ Participants

4th Edition - 2023

Hackathon Latin America

Digital Solution for Building High-Value Health Systems

5 Global Hubs

1000+ Applications

740+ Participants

5th Edition - 2024

Building High-Value Health Systems

Harnessing Digital Health and Artificial Intelligence

8 Global Hubs

1100+ Applications

500+ Participants

6th Edition - 2025

Building High-Value Health Systems

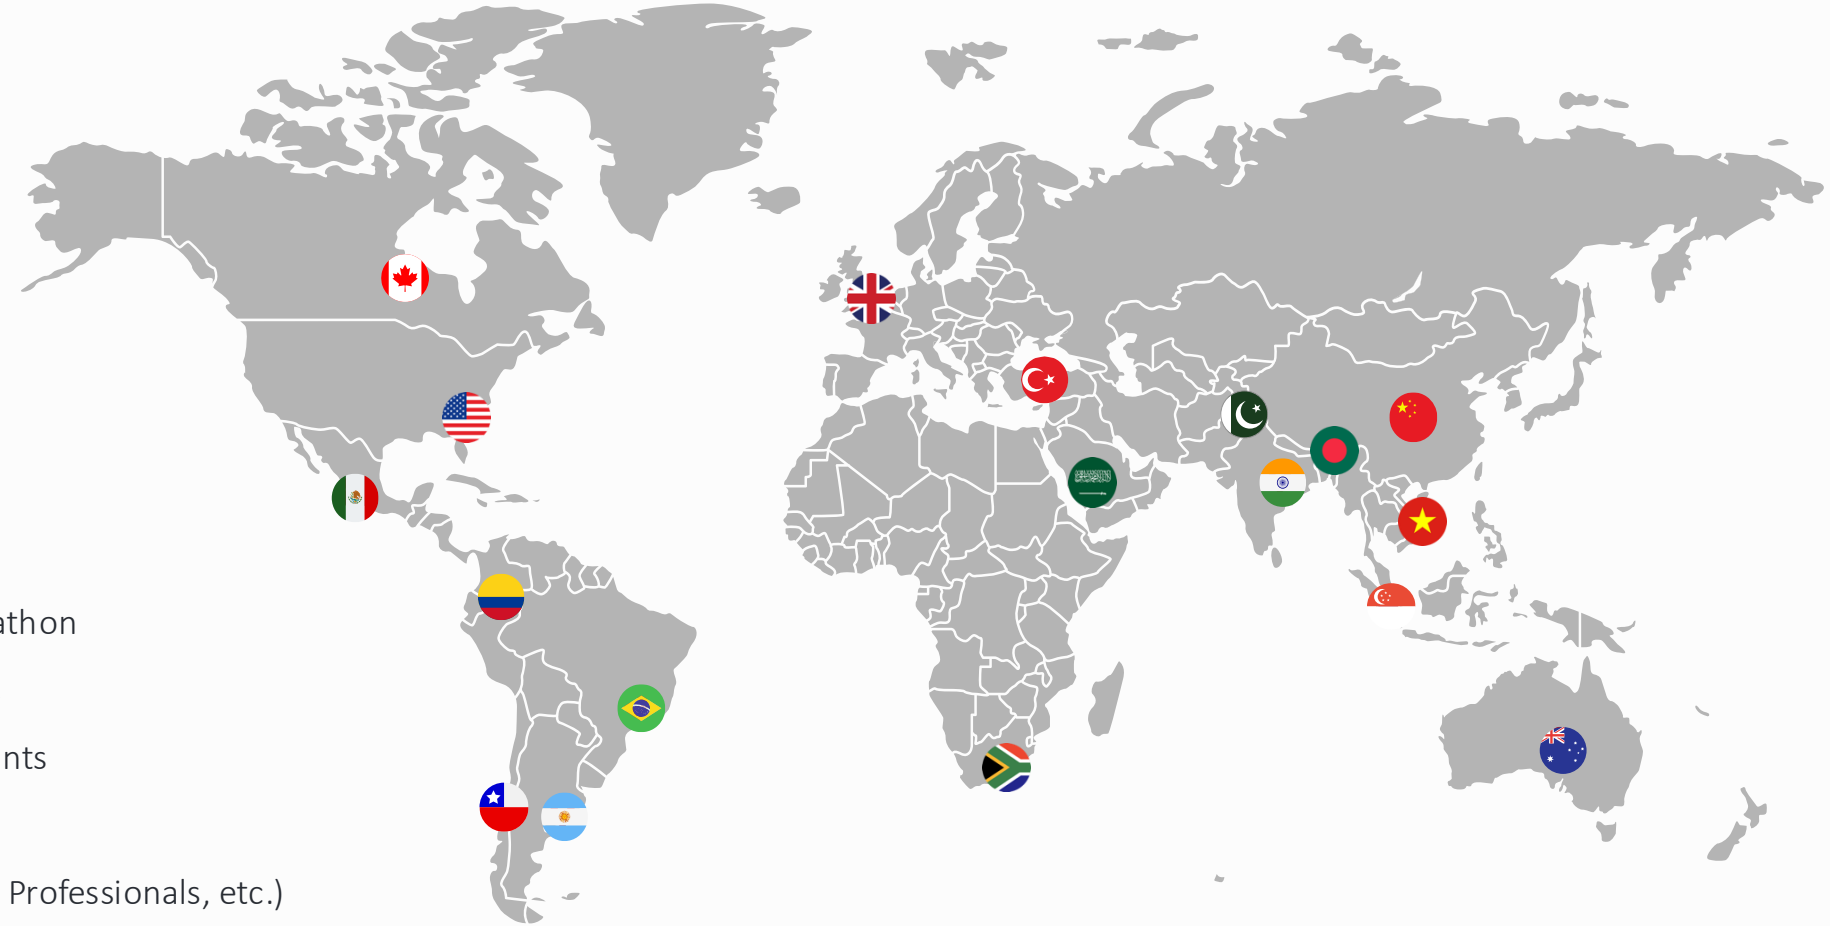
Leveraging Artificial Intelligence

19 Global Hubs

3500+ Applications

2500+ Participants

Highlights - 2025 Hackathon



- World Largest Health Systems Hackathon
- 5 Continents, 18 Countries, 19 Hubs
- 3500+ Applications, 2500+ Participants
- 30+ institutions
- 250+ teams (Students, Researchers, Professionals, etc.)

Some of the Ventures

Vincere Health is a Harvard-founded, Techstars backed, tech-enabled, virtual care provider for low income, vulnerable populations in the US. The company uses remote monitoring, financial incentives and 1:1 clinical care to help people quit smoking, engage with their care, and reinforce healthy habits.

SCRIPTIFY®

Scriptify evolves struggling community pharmacies into productive, revenue-generating omnichannel care hubs—cementing their value as the front door for chronic care in America. Our AI-powered plugin identifies at-risk, chronically ill patients and seamlessly guides them through our collaborative telemedicine platform—connecting them with underutilized clinical pharmacists to deliver preventable, personalized, and accessible chronic care.

HERA helps refugee populations access healthcare through their mobile phones. Users can navigate the local health system, keep their medical records, plan out vaccine and prenatal care appointments and receive up to date information about current health issues (such as COVID-19).

Some of the Ventures

Docosan is a healthcare service marketplace transforming the way that people in emerging markets access high quality care. From offline appointments to telehealth to test kits, Docosan's platform brings over 75,000 transparently-priced services and treatments to patients' fingertips. Docosan successfully sold out demonstrating strong market demand and trust in its solutions.

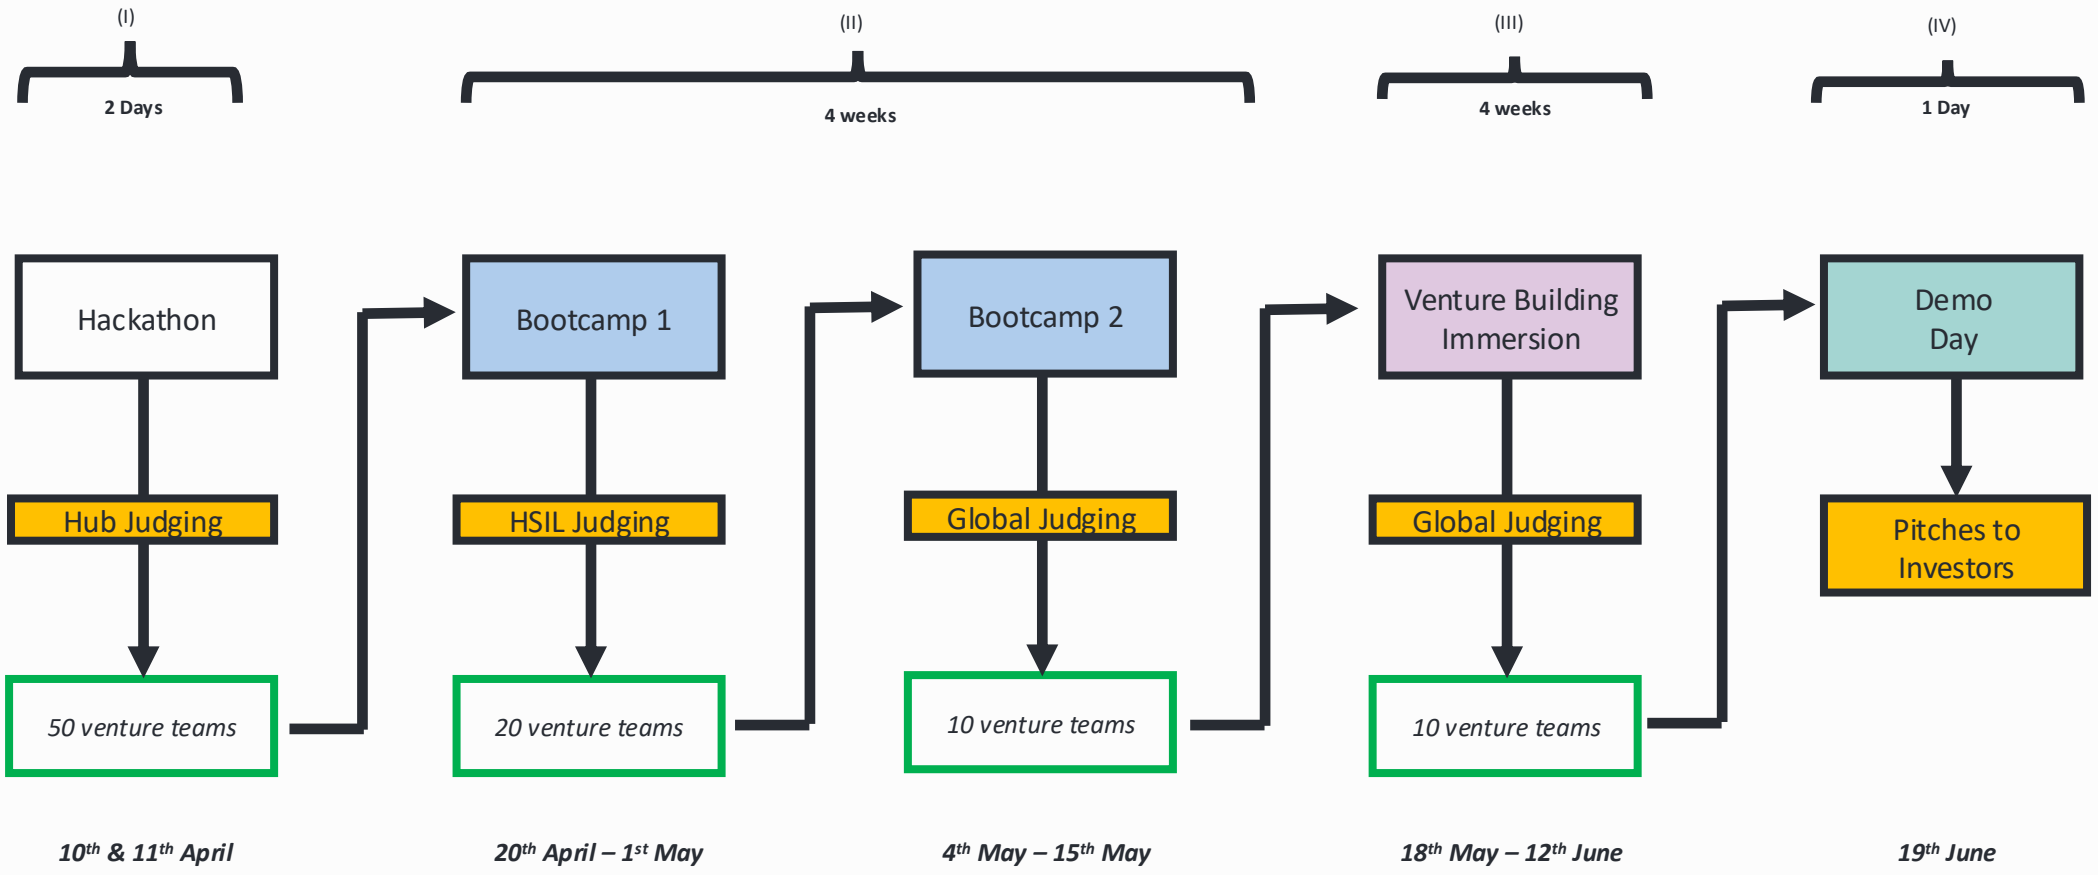
Residents Abroad is a global matching platform simplifying international rotations for medical students, residents, and researchers. We support equity in health education by providing healthcare workers globally with a digital ecosystem designed to facilitate and streamline applying for international rotations and match applicants with organizations offering international opportunities.

Clinic+O expands access to quality and affordable health care for low-income communities in Guinea by integrating mobile technology and community health best practices into primary care treatment.

Hackathon Planning Process

Hackathon planning	Participants Selection	48h Hackathon	Ventures Incubation
• Internal ideation to shape themes, goals, and structure of the hackathon	• Open applications for participants across hubs	• Venture development under mentor support	• Winning teams join a Bootcamp for venture development
• Outreach to collaborating hubs for early engagement	• Form teams and assign mentors based on expertise	• Teams pitch ideas to local judges	• Selected ventures progress into a formal incubation program
September - December 2025	***December - January 2026***	***April 10-11, 2026***	***April-June***

Hackathon – 2026 Timeline



What is expected from the Hubs?

1 - Offering Infrastructure for In-Person Event

Innovation hubs are expected to provide suitable physical spaces and infrastructure for in-person hackathon activities. This includes workspaces, internet connectivity, audio-visual equipment. Virtual attendance to the Hackathon kick off panel is also required.

2 - Attracting Local Innovators

Collaborators are responsible for engaging local innovators to participate in the event. This involves leveraging local networks and actively promoting the hackathon to ensure diverse and enthusiastic participation. A mix of students and professionals is encouraged.

3 - Facilitating Local Collaboration and Networking

Prior to the hackathon, innovation hubs should stimulate collaboration among selected participants. This includes organizing meet-and-greet sessions, or virtual forums where participants can connect ahead of the hackathon and share ideas. Creating a collaborative local environment is crucial for the success of the hackathon.

4 - Ensuring Seamless Integration with Main Event

A seamless integration of the local hubs with the main event in Boston involves coordinating schedules and communication channels to create a consistent experience for participants across the hubs. Collaborators should communicate regularly with the HSIL team to share updates, flag challenges, add to the knowledge exchange.
