Slack Invite Guide (for Hub Coordinators / Channel Managers)

Before you start

1. **Confirm you're signed in** to the correct workspace (e.g., *HSIL Hackathon 2026*).
2. **Check your permissions**: you must be a Workspace Admin/Manager or have permission to invite members.

Invite someone to the *Slack Workspace* (then add to channels)

This is the cleanest approach for hub onboarding.

Step 1 — Open the Workspace invite flow

1. In Slack (desktop or web), look at the **left sidebar**.
2. Click your **workspace name** (top-left).
3. Select **Invite people to [Workspace Name]**.

Step 2 — Choose how you want to invite

4. Select one of the following:
   - **By email** (most common): enter the person's email address.
   - **Share invite link** (if your workspace allows it): copy the link.

Step 3 — Send the invite

5. Click **Send invite** (or copy and share the link).

Step 4 — Add the person to the right channels

6. After the person joins the workspace, add them to channels:
   - Open the **channel** (e.g., #all-coordinators or your hub channel).
   - Click the **channel name** at the top.
   - Click **Add people**.
   - Search their name/email and select **Add**.

Best-practice checklist (for HSIL hubs)

- Ask invitees to **update their Slack display name** to: Name_Role, Hub/Country (e.g., John_Marketing, Boston Hub).
- Add coordinators to:
  - **Regional coordinator channel** (e.g., Africa/Asia/Europe/LatAm/North America)
  - **#all-coordinators**
  - **Their hub channel**
- Add participants to:
  - **Their hub channel**
  - **#all-hsil** (global participant channel)
  - **#introductions** (networking)

Common issues (quick fixes)

- **"I can't invite people"**: You likely don't have invite permission—notify the Slack workspace admin/core team.
- **Invite not received**: Ask them to check **Spam/Junk** or resend the invite.
- **Wrong workspace**: Confirm the workspace name in the top-left before inviting.
